Accessing Unit Tests
Appendix 6.2
Recipes For Life

To access the unit tests for the application, in the source code for the application there is a package called com.example.recipesforlife.tests . Inside this package is several classes containing Junit unit tests. An image below shows an example of these unit tests.

```java
public void testSelectCookbook()
{
    ArrayList<CookbookBean> cblist = searchmodel.selectCookbooks("book");
    Assert.assertEquals(cblist.get(0).getName(), "book1");
}
```
