Minutes - Supervisor Meeting 9 – 26/01/2015

Summary

At this meeting we discussed my progress over the Christmas break. I told him about starting implementation over the break and that I had achieved the sign in and log in pages in the application as well as just finishing off the adding recipe code. I told him about some of the challenges I had over the break such as being ill for two weeks, getting used to the development environment and changing from php to asp.net as the php on the server was not set up to use Microsoft server and the university was on break when I discovered this issue so I made the change to asp.net. We discussed my main concerns about being able to get the core development work in the time constraints as I was finding it particularly time consuming to write code for small aspects especially the syncing between databases and I was also concerned about the amount of user testing sessions I would be able to do. We also spoke about the progress report.

Next Meeting

2/2/2015 – 2pm
