**Minutes – Supervisor Meeting 15 – 09/03/2015**

**Summary**

At this meeting I updated Keith on my progress with the implementation which was mainly focussed on inserting and retrieving images from the database. This meant handling blobs. One of the main challenges of image loading is making sure the images do not take up too much memory so this means using memory saving strategies like compression, memory caches to store the image and reducing sample size. At this meeting we discussed if there was a need for a slideshow in the recipe page and the best way to size images on the recipe page. The report was also discussed and my changes that occurred to the sync code over the weekend. My aims for next week is to have the delete functionality working.

**Next Meeting**

16/03/2015 – 2pm
